

## Our Services

Atlas has an extensive portfolio of completed commercial projects across the UK and in Australia. Our experience includes assisting in the preparation of drawings such as plans, elevations, sections and details through both the design development and construction documentation phases. We have delivered tender and construction drawings for traditionally delivered projects as well as those based on a trade package format. We also have a comprehensive working experience of concrete and steel frame technologies. Our services have allowed clients greater flexibility to expand their team and resource base to enable them to meet fluctuations in demand and focus on their core function of design.

## Project Scale

Projects that Atlas has worked on have included new multi-story offices, mixed use buildings and cinema complexes. The scale of these projects has ranged from single storey retail developments up to 70 storey office towers. Build costs in the UK have totaled between 60mil USD and 400mil USD, and in the Australian market, from 25mil USD to 550mil USD. Our programme of involvement has ranged from 3 months to 2 years.

## Production Process

Our aim is to produce CAD drawings and documentation in strict accordance with our client's own office standards and protocols. Prior to beginning a project we do a thorough analysis, reviewing or often formulating a drawing list from first principles and producing a cartoon set of drawings to our client's satisfaction. We then work with briefing documents, hand sketches as well as marked up drawings to produce documentation of the highest quality.

Our service can be tailored to meet the client's requirements and all our work is supervised and managed by UK or Australian architectural professionals to ensure high quality standards.
