

# Healthcare Project Experience

## Services to Healthcare Planners & Architects

Atlas has worked on many internationally renowned healthcare projects, providing quality design documentation for many leading UK and Australian healthcare practices.

Our dedicated healthcare team assists clients in maintaining a high standard of quality information whilst providing flexibility in resource allocation, all at our competitive prices. We provide work assistance to clients from concept design through to production information for both internal and external building packages.

## Design Process

We typically produce 1:50 loaded plan layouts, 1:50 setting-out GA's, Room data Sheets, C Sheets, details for the stud partitioning to the internal walls, reflected ceilings plans with ceiling mounted services and fittings, room finishes layouts, specialist joinery details, interface details and many other internal packages. Atlas provides services for scheduling from a project database to create fully coordinated packages of information (using Codebook, Hiltron and ADB to produce equipment libraries).

Atlas will also supply on-site staff during critical periods such as user-group consultations, or at project start up for clients to manage directly. Our services allow the client to extend their team requirements through all the project stages, as and when required, at affordable rates.

All work is carefully supervised and handled by either specialist UK or Australian healthcare professionals in Vietnam with rigorous quality assurance procedures. Our senior healthcare personnel have extensive knowledge on hospital, medical research and laboratory facility delivery from many years of experience working in this sector.

As one of the leading architectural healthcare service providers, Atlas offers a professional and flexible service that can be tailored to meet the client's requirements and deliver the information to the highest international standards.
