

## Services to Landscape Architects

Atlas has worked with some of the major architectural landscaping practices in the UK, Australia and the United Arab Emirates, as well as a variety of smaller practices around the world. We have been engaged on many large scale masterplanning, urban design and landscaping projects, in addition to a significant variety of smaller scale projects in different sectors. Project types have included:

- Urban masterplanning and parklands
- Urban and suburban centres
- Residential complexes
- Commercial facilities
- Major healthcare campuses
- Hotel, sports and leisure facilities

Atlas offers landscape architecture support services, assisting in the preparation of drawings including plans, elevations, sections, details and 3D topographical modeling through the concept and schematic design, design development and construction documentation phases. Our services allow clients greater flexibility to expand their team and resource base to enable them to meet fluctuations in demand, and focus on their core function of design.

## Production Process

We typically produce CAD drawings and documentation to stipulated scales and an agreed list of deliverables in strict accordance with client CAD and file protocols, working from the client's briefing documents, hand sketches and marked up drawings.

Our services are tailored to meet the client's requirements, and all our work is supervised and managed by UK and Australian architectural professionals at our operations centre in Saigon to ensure our output is of the highest quality and meets international standards.
