

# Sports and Leisure Project Experience

## Our Services

Atlas has assisted in the delivery of high quality construction production information for sports and leisure facilities in the UK, Australia and South-East Asia. We commence most sports and leisure projects at the beginning of the construction drawing production stage in the form of a design development report and approved design drawings; however, some projects have been developed from concept design through to completion of construction documentation.

For sports and leisure facilities, the coordination of FF&E information is critical due to the extensive engineering, building services, and equipment requirements. Using a database overlay in a similar way to schools and healthcare projects we can utilise Codebook, ADB or Hiltron to schedule fixed and non-fixed equipment whilst coordinating with the building services.

Projects can be procured in either 2D, 3D or full-BIM enabled environments allowing greater coordination between structure, building fabric and building services engineering.

## Project Scale

Atlas has a portfolio of sports and leisure projects including sports halls, swimming centres and spas, with build costs ranging from 10mil USD to 50mil USD. A time frame of two to eight months is typical for most project programmes for construction documentation work whilst full involvement from design development can be managed to suit the client's procurement requirements.

## Production Process

Flexible resource allocation allows a greater control of budget costs across the project work stages whilst maintaining a good client and project knowledge base.

All work is carefully supervised and handled by either UK or Australian architects in Vietnam with rigorous quality assurance procedures. As one of the leading Architectural and Engineering service providers in the world, Atlas offers a professional and flexible service that can be tailored to meet the client's requirements.
